

The *Cognigym Student* toolkit

Should include the following items:

Baseball Sheet

CogniCards

Directional Arrow Board

Coloured Arrow Board

Vowel Replace Sheet

Letter and number cards (for MSD and MSL)

Memory Cards

Metronome

Presidents Card

Set Game

Stopwatch

Student Workbook

Visual Thinking Cards (Set A and B)

All rights reserved. No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording or any information storage or retrieval system now known or to be invented, without permission in writing from Anayo Ezennia. This ***Cognigym*** Toolkit is only to be utilized by one individual student.

Training Benefits

A major benefit of using COGNIGYM is that you will enhance underlying learning skills required in the following:

Beginning to read: Auditory Analysis, Auditory Blending, Auditory Discrimination, Sequential Processing and Auditory-Visual Association

Spelling: Auditory Segmenting, Auditory Analysis, Segmental Processing, Long-Term Memory, Visualization and Auditory-Visual Association

Math: Working Memory, Processing Speed, Long-Term Memory, Divided Attention, Logic and Reasoning

Word Math Problems: Computation, Logic and Reasoning, Visualization, Divided Attention and Comprehension

Problem solving: Logic and Reasoning, Visualization, Divided Attention, Comprehension

Reading Comprehension: Fluidity of Reading, Visualization, Sequential Processing, Vocabulary, Auditory-Visual Association

Listening Comprehension: Auditory Processing, Working Memory, Sustained Attention, Auditory-Visual Association and Visualization.

Knowledge needed for test talking: Long-Term Memory, Comprehension

Speed of completing a task: Processing Speed, Working Memory, Sustained Attention, Divided Attention

Sports (such as football, baseball, tennis): Sensory-Motor Integration, Visual Span, Visual Processing, Simultaneous Processing

Card games: Working Memory, Logic and Reasoning, Divided Attention

Jigsaw puzzle: Visual Discrimination, Visual Manipulation, Working Memory, Simultaneous Processing

Remembering names: Working Memory, Selective Attention, Long-Term Memory, Visualization, Auditory-Visual Association

Summary: Developing Attention Skills

Sustained Attention: (attention span) is the ability to stay on task for a length of time. During training, you may notice a clue to the student's attention span if he makes mistakes at the same point or time with a procedure. Help the student by gradually increasing the time spent on each procedure. At the end of training, the student should spend about twice as much time per procedure, compared to the start of training. The trainer can also set goals to work longer on a procedure than what the student's attention span typically is. So if he tends to lose attention at 30 seconds, set a goal to stay on task 35 second. Gradually increase the time as training progresses.

Selective Attention is the ability to concentrate on a task and not be distracted by other things. The trainer can work on selective attention by adding distraction while the student is doing an activity. The trainer should start with low level distractions and continue to higher level distractions as the student's selective attention is strengthened.

Divided Attention is the ability to complete two separate tasks at the same time (i.e., taking notes). This is also referred to as multi-tasking. The trainer can work on divided attention by adding additional mental activities to a procedure. The trainer should start with lower level mental activity and work towards higher levels as the student's skills are strengthened.

Definitions of the Major Learning Skills Enhanced by COGNIGYM

Auditory Processing: to process sounds. Helps one hear the difference, order, and number of sounds in words faster; basic skill needed to learn to read and spell; helps with speech defects.

Auditory Discrimination: to hear difference in sounds such as loudness, pitch, duration, and phoneme.

Auditory Segmenting: to break apart words into its separate sounds

Auditory Blending: to blend individual sounds to form words

Auditory Analysis: to determine the number, sequence, and which sounds are within a word.

Auditory-Visual Association: to be able to link a sound with an image

Comprehension: to understand words and concepts

Divided Attention: to attend to and handle two or more tasks at one time such as taking notes while listening, and carrying totals while adding the next column. Required for handling tasks quickly or tasks with complexity.

Logic and Reasoning: to reason, plan, and think

Long-Term Memory: to retrieve past information

Math Computations: to do math calculations such as adding, subtracting, multiplying, and dividing.

Processing Speed: the speed at which the brain processes information. Makes reading faster and less tiring; makes one more aware of his or her surrounding environment; helps with sports such as basketball, football, and soccer and activities such as driving

Saccadic Fixation: to move the eyes accurately and quickly from one point to another.

Selective Attention: to stay on task even when distraction is present

Sensory-Motor Integration: to have the sensory skills work well with the motor skills – such as with eye-hand coordination.

Sequential Processing: to process chunks of information that are received one after another

Simultaneous Processing: to process chunks of information that are received all at once

Sustained Attention: to be able to stay on task

Visual Processing: to process and make use of visual images. Helps one create mental pictures faster and more vividly; helps one understand and “see” word math problems and read maps; improves reading comprehension skills.

Visual Discrimination: to see differences in size, color, shape, distance, and orientation of objects.

Visual Manipulation: to flip, rotate, move, change color, etc. of objects and image in one’s mind.

Visualization: to create mental images or pictures

Visual span: helps one see more and wider in a single look. Improves side vision. Enables faster reading and better, faster decision in sports.

Working Memory: to retain information while processing or using it.

Use of Distractions

In order to increase your student's selective attention skills so he can remain on task despite distractions, be sure to add distractions you create after a few levels. Warn the student that you may try to distract him during a session as a part of training.

Low-Level Distraction

1. Walk around the student while he does an activity
2. Walk your fingers around the activity
3. Make funny faces or sounds

Medium-Level Distraction

1. Walk your fingers up the student's arms into his hair
2. Clap to a different beat than the metronome
3. Touch his fingers, his arm or his hair with a puppet
4. Ask silly questions or tell silly stories
5. Sing a song

High-Level Distraction

1. Clap in beat for a short time and then begin to clap off beat
2. Start a task in unison with the student and then begin to give some wrong answers. For examples, say the arrows as the student says them and then give wrong answers

Dealing with Hyperactivity

The trainer should emphasize to the student the Importance of paying attention during the session. To encourage a student to focus, you can play the 'focus game' in which the student is asked to find out how long he can go in session without: a) being fidgety with chair, table, equipment on the table, b) turning to look out the window, c) kicking the table, d) asking when he can do the next procedure, e) talking to you about what happened during the day, etc. In other words, the student should remain on task. To play the 'focus game', the trainer times how long the student can go without losing focus. Then let the student know what he did to lose focus, how long he was on task, and then set a goal to maintain focus for a longer period of time. For example, "Johnny, you turned around while we were trying to do memory cards. I need you to face this way during our sessions. You focused for 3 minutes. Now, let's see if you can focus for 5 minutes." Start the stop watch again and continue until the student loses focus.

By keeping the student consciously aware of what he did to lose focus, the student can learn how to increase his 'on task' time. This maybe something the trainer continues throughout training until the student can focus for most of the session. Be sure to give the student lots of praises as he improves in this area. Points can be added to the Student Bonus Chart each time he improves his 'on task' time.

You may also want to have a student keep his hands on the training table when not in use for a procedure. Another good practice for helping the student is to either have him lie on the floor or stand in front of you and instruct him to keep his body perfectly still. When he moves, call his attention to which part moved and remind him to fight the urge to move. Explain how important it is to keep your body under control. Since part of attention is learned, it may be helpful to practice this a few minutes at the beginning of each session until better self-control is exhibited.

Dealing with Student Frustration

One of the key points of our training is to work right below a student's frustration level. In other words, keeping the training fun, yet as intense as you can for a particular student so he achieves maximum results. Many times this can be a great struggle for trainers to find that perfect balance. Often, trainers in their desire to be 'nice', to be nurturing, or to build self-esteem, end up creating sessions that lack intensity. As a result, they get very mediocre results. On the other hand, a session shouldn't be a joyless hour with a cold and heartless drill sergeant. The key is to strike a balance. Don't make the session so intense that a student ends up disliking you, is constantly frustrated and in tears, and feels that reaching the training goal is hopeless and impossible. Yet, also don't fall into the trap of making the training so easy that the student doesn't get the improvement he can achieve.

Start each new level by having the student try it a few times. For higher levels, have the student try it first without the metronome. You need to decide whether the student should be working on the level stated or it should be broken into multiple steps. If the student will need a lot of drill to pass the level, create mini-goals to keep the student motivated. This allows the student to have multiple small successes rather than striving to pass one larger goal. However keep in mind, whenever you adjust the metronome speed, add reinforcement, or create mini-steps towards passing a level, this 'crutch' should be temporary and a student must still pass a level as written. Remember, extra help should be provided minimally and for as short time as possible.

Once the student starts reaching his limit and is getting frustrated, give him an ending point to practicing that particular procedure (a light at the end of the tunnel). The end point could be stated as “Let’s try this 4 more times, and then we will go on to do something else” (or a procedure he enjoys). You may also say, “Let’s do this for 3 more minutes and then we will do a different procedure”. Let him see you start the stop watch and then continue for the time you gave. The amount of time continues or the number of times you try a level will be determined by you. You need to adjust your demands according to how hard you can push your student. As the student moves through the program, the trainer should start to increase the amount of minutes so the student can learn how to work longer and harder before getting frustrated.

If a student has a low frustration level, COGNIGYM can play an important role in helping to increase the amount of time and work the student does before he gets to the point of frustration. You need to give the student a lot of success right away so he will be willing to continue working hard, throughout the training. If the student knows that you will only give him goals that are ultimately achievable, the student will trust you and become more and more willing to work long and hard to reach a goal.

A great tip: students may start to make errors after they have been drilling on a level for a long time during a session. In that case, you may want to stop training and allow the student take a break for 10 – 15 seconds. Then, try the same procedure again. Often, this little break gives the student a ‘second wind’ and he will pass the level right away.

Warning: Especially for students, who are struggling, never lower your expectations! Just as research shows that a teacher’s expectations have a great impact on the achievement of students in a classroom, your high expectations will push students to improve tremendously. Remember, you get what you expect. So if you believe your student can’t succeed, he won’t. If you maintain high expectations, great improvements and success will come.

Mental Activities

Adding complexity to procedures is an excellent way to build divided attention skills and requires the student to integrate a mental activity with the task he’s performing. Start your student on a task. During the task, give him something easy such as adding simple numbers, giving the sounds of letters, naming animals, listing items in the bedroom or refrigerator, etc. Then you may want to increase the complexity of the task by having the student do a more difficult mental activity such as giving directions, telling a story, or talking about a movie plot.

Low-Level Mental Activity

1. Have the student repeat an object or a number

2. Have the student answer a question such as “What is your favourite color?”
3. Give the student the name of an animal and have him tell what sound it makes
4. Say a sentence and have him repeat it
5. Say a letter and have the student give you the most probable sound associated with it

Medium-Level Mental Activities

1. Give the student two numbers and have him give you the sum
2. Give the student two numbers and have him give you the product
3. Have the student repeat a list of three, four or five objects forward or backward
4. Ask the student to describe something (what he did last night, what his room looks like)
5. Give the student the sound of a word and have him tell you the word

High-Level Mental Activities

1. Give the student three numbers and have him give you the sum
2. Give the student three numbers and have him add the first two and multiply the answer by the third one
3. Give the student five sounds in a word and have him tell you the word
4. Give the student two numbers and have him give you the sum and then add the sum to the next group of numbers you give (keep a running total)
5. Do the MDA procedure while doing a different activity

Why we use a Metronome

Using the metronome is crucial to your success with our program so never eliminate this component of the training! Likewise, if the procedure requires a student to work on every beat, constantly require that to happen. As with all of the training, don't lower your expectations! If you need to adjust the metronome speed for a short time, get back to the expected beat as quickly as possible.

Here are several key reasons we use metronome:

1. Imbeds skills – helps students do things automatically
2. Creates intensity
3. Improves processing speed
4. Develops attention skills – divided and sustained attention
5. Ensures there are no mental breaks

FINAL SCORE CARD – STUDENT/PARENT EVALUATION (TO BE COMPLETED AFTER THE PROGRAM IS FINISHED)

Parent/Student Name _____ Date _____

Even though the effectiveness and result of the program cannot be fully appraised until six to twelve months after the completion of the program, we need your opinions and evaluation upon completion of the program. We strive to provide excellence in all our programs and services, and this score card is an important part of our ongoing quality control.

Please choose the number which most accurately reflects your observations:

Please answer question 1 – 4 on the following scale

- 1 = bad
- 2 = poor
- 3 = fair
- 4 = good
- 5 = very good

- | | |
|---|-----------|
| 1. Please rate your trainer (consider the concern and interest shown for the student, the ability to get your student to enjoy the program and work hard, and show how helpful the trainer was in answering questions and explaining procedures). | 1 2 3 4 5 |
| 2. How effective were our programs at handling the problems that made you seek our help? | 1 2 3 4 5 |
| 3. Rate how consistent and intelligent your child was in completing the home training. | 1 2 3 4 5 |
| 4. Rate the program's value in terms of time, effort, and dollars spent. | 1 2 3 4 5 |

Rate the student's improvement, as a result of training, utilizing the following scale for questions 5 – 13:

N/C = Wasn't a Concern Before Training

- 1 = No Improvement
- 2 = Little
- 3 = Moderate
- 4 = Significant
- 5 = Phenomenal

- | | | | |
|----------------------------|------------------------|-----|-----------|
| 5. Reading or Spelling | Amount of Improvement: | N/C | 1 2 3 4 5 |
| 6. Concentration/Attention | Amount of Improvement: | N/C | 1 2 3 4 5 |

7. Behavior	Amount of Improvement:	N/C	1	2	3	4	5
8. Making excessive mistakes	Amount of Improvement:	N/C	1	2	3	4	5
9. Working too slowly	Amount of Improvement:	N/C	1	2	3	4	5
10. Having to work too hard	Amount of Improvement:	N/C	1	2	3	4	5
11. Memory	Amount of Improvement:	N/C	1	2	3	4	5
12. Comprehension	Amount of Improvement:	N/C	1	2	3	4	5
13. Self-image	Amount of Improvement:	N/C	1	2	3	4	5

COMPREHENSION DEMONSTRATION IDEAS

Purpose: Develops comprehension and visualization skills

Equipment: Comprehension Demonstration Ideas List

Pencil and paper

Various, small, office items you gather

Procedure: The student demonstrates different ideas by using objects or drawings. Objects may be items found in the office or classroom such as ruler, ball, paper etc. For example, from list A, the concepts “the cat slept in the hat” could be demonstrated by taking an eraser (which represents the cat) and dropping it inside a pencil case (which represents the hat). If the student is struggling with a particular phrase, have the student paraphrase what the concept means or tell a story to illustrate the main point.

Passing: 4 of 5 correct

Level	
1	The student should demonstrate concepts from list “A” by using objects.
2	Same as level 8, but with list “B”.
3	Same as level 8, but with list “C”.
4	The student demonstrates concepts from list “D” by drawing them on paper.
5	The students should demonstrate concepts from list “E” by using objects.
6	Same as level 12, but with list “F”

- A The cat slept in the hat.
- A The cow jumped over the moon.
- A Kip hid under the chair.
- A Candy walked to the store.
- A Tanya gave her dog a bath.
- A The ball broke the window
- A Jack jumped out of the box.
- A Emme pulled a rabbit out of the hat.
- A The puppy caught the frisbee.
- A Taylor swam across the river.
- A The tent blew over in the wind.

- B The story of The Snow White.
- B The story of Beauty and The Beast
- B The story of Humpty Dumpty.
- B The story of Incy Wincy Spider.
- B The story of Jack and Jill.
- B The story of Little Miss Muffet.
- B The story of Little Red Riding Hood
- B The story of Jack and The Bean Stalk.
- B The story of Little Jack Horner.
- B The story of Old Mother Hubbard.

- C Soft and hard.
- C Clean and dirty.
- C Round and square.
- C Happy and sad.
- C Kind and wicked.
- C Above and below
- C Silly and serious.
- C Good and bad.
- C Quiet and loud.
- C Fast and slow.
- C Tall and Short
- C Organized and messy.
- C Light and dark.
- C Friendly and mean.
- C Proud and humble.
- C Worried and peaceful.
- C Busy and idle.

- D A splitting headache.
- D Eating candy will spoil your appetite.
- D Rome wasn't built in one day.
- D Her heart was broken.
- D Hunter jumped for joy.
- D Shaun moves at a fast pace.
- D John was scared stiff.
- D Kenzie is as happy as a lark.
- D You are one in a million.
- D Joe is a nervous wreck.
- D If it's not out of the bag, it's in.
- D Treat others as you would like to be treated.

- D He gave more than expected.
- D If a job is too big, break it into smaller jobs.
- D The shortest distance between two points is a straight line.
- D He's between a rock and a hard place.
- D Detours take time.
- D Straight to the top.

- E If the going gets tough, the tough get going.
- E No machine can do the work of one ordinary man.
- E If you want to get better at something, get help from someone who is better at it than you
- E Made to order for you.
- E You are limited only by your imagination
- E If you don't succeed at first, try again.
- E Without order, there is confusion.
- E Thinking you can't is like beating yourself up.
- E Slow down or you will get worn out.
- E A request rewarded will get done.
- E Every day make a list of what you want to do.
- E Haste makes waste.
- E Eating properly keeps you healthy.
- E It helps to read the instructions.
- E Stretching the truth is telling a lie.
- E Fear can keep you from having fun.
- E Pay attention or you will get lost
- E A penny saved is a penny earned.
- E The only job where you can start at the top is digging a hole
- E One machine can do the work of fifty ordinary men.

- F You can lead a horse to water, but you can't make it drink
- F You can't teach an old dog new tricks.
- F Attitude determines altitude.
- F Never live in the past but always learn from it.
- F All men are created equal.
- F You become what you think.
- F Some people get all the luck.
- F Less than many is few.
- F Honor thy father and mother.
- F Innocent until proven guilty.
- F Stealing is wrong.
- F He did it just in time.
- F One time, too many.
- F Don't let life pass you by.
- F Time flies when you are having fun.
- F They got a lot done because they worked together.
- F Without proof, I can't take action.
- F If you can't visualize, it is hard to understand.
- F Think outside the box.
- F Tell me and I forget; show me and I remember; involve me and I understand
- F A kind word will get more done than money.

COLOUR ARROWS DISCRIMINATION

Purpose: Develops concentration, orientation (reversals), divided attention, selective attention, and processing speed

Equipment: Color arrows chart and metronome

Procedure: The students should read the directions or colours on the arrow chart

Passing: 90% correct for a minimum of 3 lines.

Level	
1	The student should call out the colours of the arrows.
2	The student should call out the directions of the arrows
	Metronome set at 120 bpm or ----- (adjust as necessary) Do task every other beat.
3	The student should call out the colours of the arrows on every other beat.
4	The student should call out the colours of the arrows but switching blue for yellow, and yellow for blue on every other beat.
5	The student should call out the colours of the "right" and "left" arrows but call out the direction of the "up" and "down" arrows on every other beat
6	On the arrow board, the student should call out the pattern (colour, colour, direction, colour, colour, direction, etc.) on every other beat.
7	On the arrow board, the student should call out the pattern (colour, direction, colour, direction, etc.) on every other beat
8	The student should call out the pattern (direction, direction, colour, colour; direction, direction, colour, colour etc. on every other beat.

COLOUR STROOP TEST

Purpose: Develops concentration, orientation (reversals), divided attention, selective attention, and processing speed

Equipment: Stroop test chart and metronome

Procedure: The student should read the words and call out the colour of the words on the stroop test chart

Passing: 90% correct for a minimum of 3 lines.

Level	
1	The student should read the words
2	The student should call out the colours of the words
	Metronome set at 120 bpm or ----- (adjust as necessary) Do task every other beat.
3	The student should read the words on every other beat.
4	The student should call out colours of the words but switching green for red, and red for green on every other beat.
5	On the word chart, the student should call out the pattern (colour, word, colour, word, etc.) on every other beat
6	The student should call out the pattern (colour, word, colour, word, etc.) on the word chart but switching the colours blue and green when calling out the colours on every other beat.

DISCRIMINATION MEMORY CARDS

Purpose: Develops discrimination of shape, size, orientation; visual memory; visualization; integration.

My Benefits:

Equipment: Memory Cards, (Arrange smallest to largest. Number 1 to 6 on back of cards), workboard (see to right), and metronome (120 bpm or as specified by trainer).

Procedure: Student and trainer each have a set of Memory cards and sit across from each other with the work board of 12 squares (six squares for the trainer and six squares for the student) Student closes his eyes until trainer has placed a card on the board. On the trainer's command "open". Student opens his eyes and starts counting in beats for a specific number of seconds while studying the work board. When time is up, trainer quickly places a piece of cardboard between his work board area and student's area (perpendicular to the table). If the student looks down at his card during the initial counting, trainer drops the student's cardboard into position. In the meantime, the student keeps counting for a specific number of seconds and tries to match his own card(s) to the trainer's. The student must place the matched card(s) in the same position on the work board as the trainer's. The work board is a photocopy and not a mirror for the student, so trainer's top-left is student's bottom-right (see example above).

Passing: 4 of 5 correct

Assigned	Passed	Level	
		6.1	Lay out all cards in a perpendicular group and the student should match all of them. Do this for size (web), shapes and orientation cards. No counting or beats
		6.2	Student matches one size card (card 1, 2, 4, and 6). No counting or beat.
			Student counts to 10 on every beat. Student studies cards until the count of 3 and then matches cards to the count of 10.
		6.3	Student should study one size card (card 1, 2, 4, and 6)
		7.1	Student should study two size card (card 1, 2, 4, and 6)
		7.2	Student should study two shape cards (use all six cards)
		8.1	Student should study three size cards and three shape cards (use all six cards)
		8.2	Student should study three orientation cards (use all six cards).
			Student counts to 12 on every other beat. Student studies cards until the count of 4 and matches to the count of 12.
		9.1	Student should study four size or shape card (use all six cards)
		9.2	Student should study four orientation cards (use all six cards)
		10	Student should study a mixture of four size <u>and</u> orientation cards (use all twelve size and orientation cards)

DISCRIMINATION ORIENTATION ARROWS

Purpose: Develops orientation (reversal), integration, visualization, concentration, fixation, and processing speed

My Benefits: _____

Equipments: Arrow board, Metronome

Procedure: The student should read the arrows on the arrow board

Passing: 90% correct for a minimum of 3 lines

Assigned	Passed	Level	
		6	The student should call out the direction of the arrows from left to right
			Metronome set at 120bpm or _____ (adjust as necessary)
		7.1	Same as level six but on every other beat
		7.2	The student should call out the direction of the arrows and point his or her hands in the same direction on every other beat
		8.1	Same as level 7.2 but on every other beat
		8.2	The student should call out the direction of the arrows as if they were turned a quarter-turn clockwise on every other beat
		9	Same as level 8.2 but on every other beat
		10	The student should call out the direction of the arrows and point his or her hands in the opposite direction on every other beat
		11	Same as level 10 but on every beat
		12	The student should call out the opposite direction of the arrows and point his or her hands in the original direction on every other beat.
		Adult	The student should start by calling out any direction. From this point on the called out direction is modified by the secret code that the arrows now represent (in other words, arrows no longer represent direction but instead represents how many quarter turns clockwise. You are to modify the last direction called out: right arrow means $\frac{1}{4}$ turn clockwise, down arrow means $\frac{1}{2}$ turn clockwise, left arrow means $\frac{3}{4}$ turns clockwise and up arrow means no turn). If the student calls out "right" and the first arrow on the chart is pointing down, the student says "left" (initially said "right" but when it is turned $\frac{1}{2}$ turn clockwise from right, the arrow is left). If the next arrow on the chart is right, student says "up" (student last said "left," but when it is turned $\frac{1}{4}$ turns clockwise from left, the answer is up). This continues with each arrow on the chart modifying the direction called out.

DISCRIMINATION SPEED LETTERS

Purpose: Develops the discrimination skills of shape and orientation, fixation, processing speed, reversals, and visual span.

My Benefits:

Equipment: DSL worksheets that follows, stopwatch, and metronome.

Procedure: The trainer determines certain target letters and instructs the students to circle, cross out (with an "X"), square, etc., those letters chosen from left to right. Inform the student that the procedure is timed, that he or she should work quickly and accurately, and that there is a four-second penalty for each error. Target may be used more than one time. Targets are "DSL-A" (13 letters used 10 times), "DSL-B" (13 letters used 18 times), "DSL-C" (8 letters used 18 times), and "DSL-D" (4 letters used 36 times)

Passing: Pass each level twice.

Assigned	Passed	Level	
		6.1	The student should use "DSL-A" and circle all occurrences of one letter within 40 seconds.
		6.2	Same as 6.1 but within 35 seconds
		6.3	The student should use "DSL-B" and circle all occurrences of one letter within 65 seconds.
		7.1	Same as 6.3 but within 55 seconds
		7.2	The student should use "DSL-A" and circle two letters within 40 seconds.
		7.3	Te student should use "DSL-B"; circle one letter and cross out another letter within two minutes
		8.1	The student should use "DSL-C"; circle one letter and cross out another letter within one minute 30 seconds.
			Set metronome at 120bpm or _____ (adjust as necessary)
		8.2	Same as level 8.1, but counting to every other beat
		9.1	The student should use "DSL-D": circle one letter and cross out the second letter in two minutes 30 seconds while counting to every other beat
		9.2	The student should use "DSL-C": circle one letter, cross out a second letter, triangle around a third letter within three minutes while counting to every other beat
		10	The student should "DSL-D": circle one letter, cross out a second letter, place triangle around the third letter, and place a square around the fourth letter within three minutes and 15 seconds while counting to every other beat
		11	Same as level 10 but within 3 minutes.
		12	The student should use "DSL-D": circle all p's, put a square around all b's, alternate with a triangle and then a diamond around every d, and alternate with a single line and then an X through every other q within 3 minutes.

INPUT FIXATION BASEBALL

(IN OFFICE PROCEDURE ONLY)

Purpose: Develops accurate saccadic fixation, concentration, integration, and visual span

My Benefits:

Equipment: Baseball board (on a chart that is separate from this workbook)
Metronome (initially set at 60)

Procedure: The student should look at a certain “base” on the baseball board as directed. As the student’s eyes moves from one base to the next, there should only be one smooth eye movement and fixation per move.

If a student is having difficulty waiting to look in the early levels of the activity or is extremely impulsive in general, you can play “Captain, May I?” with them. For this modification, the trainer calls out the base, but before the student looks, he must ask, “Captain, May I?” If the trainer says no, he should wait and ask again. If the trainer says, “Yes,” the student may look at the next base.

Passing: 8 of 10 correct, unless otherwise stated below

Assigned	Passed	Level	
			For level 6 through 8.2, there can be a pause after the “look” beat before calling out the next base
		6	The student should fixate on the “base” the trainer calls out (no beat)
		7	The student should fixate on the “base” the trainer calls out, but with a two-beat delay (first...beat...beat...look..., etc.)
		8.1	The student should fixate on the “base” he calls out himself with a two beat delay
		8.2	Same as level 8.1 but with a no beat delay (first...beat...look..., etc.)
			For level 9 through 12, the next base must be said immediately after the “look” beat
		9	The student should call out the “base,” wait two-beats and then look as he says “look.” (first...beat...beat...look...third...beat...beat...look..., etc.)
		10	Same as level 9 but after the student has called out ten bases, he should be able to recall all ten bases in sequence
		11	Same as level 9 but change the metronome to 120 and vary the delay depending upon the base the student calls out first. Pitcher will be no delay, third will be a three-beat delay, and home will be a four-beat delay (first...beat...look...second...beat...beat...look...third...beat...beat...beat...look..., etc.). Student may pause after reading a base and before calling the next
		12	Same as level 11, but there should be no delay between the base and fixating (first...look...third...look..., etc.)

INPUT PURSUIT NEAR-POINT

(IN OFFICE PROCEDURE ONLY)

Purpose: Develops smooth pursuit and fixation skills, concentration, and integration

My Benefits:

Equipment: Penlight, pen, or pencil

Metronome

Passing: 8 of 10 correct, unless otherwise stated below.

Assigned	Passed	Level	
			Procedure: The student should fixate on a particular object for a period of time as directed by the trainer without breaking eye contact
		6.1	The student should fixate on the trainer's eyes for 30 minutes without breaking eye contact
		6.2	Same as level 6.1, but the student also turns his or her head slowly up and down or left and right
			Procedure: The student should fixate on and follow a penlight, pen, or pencil without breaking eye contact – as instructed by the trainer. Don't shine the light directly on the student's eyes
		7.1	The student should fixate on the penlight as it moves in an eight-inch circle, 12 inches in front of the student. The penlight should complete one circle per four seconds. The clockwise and five times counter-clockwise.
		7.2	The student should fixate on the penlight as it spirals towards him from 12 inches away with an eight-inch diameter, to four inches away with a two-inch diameter (and as it spirals back out as well). The student should continue to do this until the penlight completes the circle five times.
		7.3	Same as level 7.2, but the student claps on every other beat. Set the metronome at 120.
		8.1	Same as level 7.3, but starting from eight inches away, at twice the pace (one circle per two seconds), with an eight-inch diameter. Set the metronome at 120
		8.2	Same as level 8.1, but the student also performs a mental activity.

MEMORY COMPUTATION COLUMNS

Purpose: Develops processing speed, math computation, divided attention, long-term memory, sustained attention, and working memory.

My Benefits:

Equipment: Number columns, metronome, and stopwatch.

Procedure: This procedure will be especially helpful for the students that have difficulty with math facts, the Memory Divided Attention procedure or the 'Visual Fixation Number' procedure.

The student add a constant number to each number in a column (for example, numbers in column G), saying only the answer. If the student was reading down column G with these numbers: 7, 2, 6, 9, 3, and was adding the constant 4, the student will say: 11, 6, 10, 13, 7, etc.

If needed when starting a new level, have the student first add the number with no timing or beat and immediately correct any error. Then, have the student try to pass a column within 20 seconds. The student should complete a column of sum at 60 bpm saying a sum on every beat.

To adjust the procedure:

- **The student can also practice giving the difference (never negatives numbers),** so if the column numbers were 7, 2, 6, 9, 3, and the students were giving the difference between 5, the students should say: 2, 3, 1, 4, 2.
- **The trainer can also use the same technique to practice giving the product:** so if the column numbers were 7, 2, 6, 9, 3, and the students was giving the product using a 5, the student would say: 35, 10, 30, 45, 15.

Passing: A passing occurs when a student completes one full column without mistakes. Younger students can compute numbers at a slower metronome speed than indicated (or try 108 bpm every other beat instead). Note: It is more important to get a student on beat than to wait until they can be at 60 bpm. Once they are on beat always try to move them forward 60 bpm.

Assigned	Passed	Level	
		6.1	Have the student add one to every number in a column on beat
		6.2	Same as level 6.1, but have the student add 2
		6.3	Same as level 6.1, but have the student add 3
		7.1	Same as level 6.1, but have the student add 4
		7.2	Same as level 6.1, but have the student add 5
		7.3	Same as level 6.1, but have the student add 6
		8.1	Same as level 6.1, but have the student add 7
		8.2	Same as level 6.1, but have the student add 8
		9	Same as level 6.1, but have the student add 9

7	6	8	5	4	4

MEMORY DIVIDED ATTENTION

Purpose: Develops attention skills

My Benefit:

Equipment: MDA – Sheet 1: Student column 1 = Sum, Student column 2 = Differences*

MDA – Sheet 2: Sums

MDA – Sheet 3: Student Column 1 = Product

Student Column 2 = Alternate sum, difference, product, etc*

*Note – students give the difference (absolute value), never negative numbers,

Stopwatch, Metronome

Procedure: The trainer calls off numbers from the MDA sheets, and the student give the correct answer based on the last two numbers the trainer said. If the students have a great deal of difficulty with MDA, try MCC first. A modification for young students is to first have them put numbers from the MDA-1 sheet on their hands. MDA-1, column 1 reads:

Trainer:	“one...three”	(1 + 3...)
Student:	“four”	(...= 4)
Trainer:	“two”	(3 + 2...)
Student:	“five”	(...= 5)
Trainer:	“four”	(2 + 4)
Student:	“six”	(...= 6)
Trainer:	“four”	(4 + 4...)
Student:	“eight”	(...= 8)

Passing: Pass each level in the manner indicated below

Assigned	Passed	Level	
		6.1	Using MDA-1, state 10 consecutive, correct sums.
		6.2	Same as level 6.1, but within 30 seconds.
		7.1	Using MDA-1, state 20 consecutive, correct sums. After passing with the sum, state 20 consecutive differences to pass this level
		7.2	Same as level 7.1, but within 60 seconds
		8	Using MDA-2, state 30 consecutive, correct sums
		9	Same as level 8 but within 60 seconds
		10	Using MDA-3, 40 consecutive correct products within 80 seconds
			Metronome at 60 bpm or _____ (adjust as needed). Level 11 only.
		11	Using MDA-1, trainer holds up the appropriate number of fingers to represent numbers rather than saying them out loud. Student respond by holding up the appropriate number of fingers to represent the sum while counting to 100 (one number per second, metronome at 60). Student state 10 consecutive, correct sums.
		12	Using MDA-3, state 20 consecutive, correct response within 60 seconds (sum, difference, product, etc). No metronome
		Adult	Same as level 12, but state 30 consecutive, correct responses within 45 seconds. No metronome.

MEMORY ORIENTATION ARROWS

Purpose: Develops orientation, visual memory, visualization, discrimination, integration, processing speed, and visual span

Benefits: _____

Equipment: Arrow board
Metronome set at 120bpm or _____ (adjust as necessary)

Procedure: The arrow board should be at reading level in front of the student. The student should look at a certain number of arrows on the board and memorize them. The student should then say the letters of the line, say, "close," as he or she close his or her eyes, and repeat, in order, the direction of the arrows studied. For example, on the arrow board, level 6 to every other beat would be:
A...beat...close...beat...right...beat...left...beat...B...beat...close...beat...down...beat...down...beat...C...beat...close...beat...left...beat...right...beat..., etc.

Passing: 90% correct. Finish a full column to record a pass.

Assigned	Passed	Level	
		6	The student should do two arrows (one on each side of the letters) to every other beat
		7	Three arrows to every other beat
		8	Four arrows to every other beat. If needed, teach chunking (seeing several arrows as a pattern – for example, the upper right corner of a box)
		9	Same as level 8, but the student should say the opposite direction of the arrows
		10	Same as level 8, but the student should turn the arrow a quarter-turn clockwise
		11	Five arrows to every other beat
		Adult	Six arrow to every other beat. Once they master six arrows, you can continue to have the rotate all of the arrows in a given direction

MEMORY SPATIAL DIGITS

Purpose: Develops concentration, memory, visual span, and visualization skills.

My Benefits:

Equipment: Digit (number) card
Metronome

7		
		2
	9	

Procedure: The trainer shows a digit card to the student. The card contains nine possible positions that are arranged like a tic-tac-toe board, on which three to six digits are displayed. The student should study the digits and their positions on the card while counting in beat. The student is allowed to study the card for the same amount of seconds as they are digits on the card (e.g., three numbers for three seconds, four numbers for four seconds, etc.). Then the trainer removes the card and the student should recall the digits and the positions. The student should say “blank” for any position that does not have a digit in it. For example, the above card would read left to right as: “seven, blank, blank, blank, blank, two, blank, nine, blank.”

Passing: 4 of 5 correct

Assigned	Passed	Level	
		6.1	After studying a three-digit card for three seconds, the student should call out the digits and the blank from left to right. No counting or beat
			Metronome set at 60bpm or _____ (adjust as necessary)
		6.2	Same as level 6.1 but in beat
		7	Same as level 6.2, but with a four digit card for four seconds
		8	After studying a four-digit card for four seconds, student should call out the digits and the blank in the order the trainer requests (such as bottom-up, right-left, diagonally, etc.) and in beat. Directions may be given verbally or by the trainer drawing in the air, while the student is counting
		9	Same as level 8, but student add a constant (such as one, two or three) to each digit and call out the sums rather than the original
		10	Same as level 8, but with a five-digit card for five seconds
		11	Same as level 9, but with a five-digit card for five seconds
		12	Same as level 11, but study the card for only three seconds
		Adult	Same as level 12, but with six-digit card, multiply each digit by three.

MEMORY SPATIAL LETTERS

Purpose: Develops concentration, memory, visual span, auditory processing, and visualization skills.

My Benefits: _____

Equipment: Letter cards, Metronome

d		
		m
	s	

Procedure: The trainer shows a letter card to the student. The card contains nine possible positions that are arranged like a tic-tac-toe board, and on which three to six letters are displayed. The student should study the letters and their positions on the card while counting in beat. The student is allowed to study the card for the same amount of seconds as there are letters on the card (e.g., three letters for three seconds, four letters for four seconds, etc.). Then, the trainer removes the card and the student should recall the sounds and the positions. The student should say “blank” for any position that does not have letters. For example, the above card’s sound would read left to right: /d/, blank, blank, blank, blank, /m/, blank, /s/, blank.

Passing: 4 of 5 correct

Assigned	Passed	Level	
		6.1	After studying a three-letter card for three seconds, the student should say the sound of the letter and the blank from left to right
			Metronome set at 60bpm or _____ (adjust as necessary)
		6.2	Same as level 6.1, but in beat
		7	Same as level 6.2, but with a four-letter card for four seconds
		8	After studying a four-letter card for four seconds, the student should say the sound and the blank in the order the trainer requests (such as bottom-up, right-left, diagonally, etc) and in beat. Directions may be given verbally or by the trainer
		9	Same as level 6.2, but with a five-letter card and for five second
		10	Same as level 8, but with five-letter card and for five seconds
		11	Same as level 6.2, but with six-letter card and for three seconds.

MEMORY VISUAL LIST

Purpose: Develops visualization skills using links

My Benefits: _____

Equipment: Presidents' pictures (on a separate card) and President Script (on the next page)
List A – Words from Memory List
List B – Words from Memory List, Including Abstract Words
Stopwatch

Procedure: The trainer reads the story about the president while the student focuses on the pictures. By using these visualization and association techniques, the student learns the list of presidents. After learning the list of presidents, the student links other words with the images he or she creates (mental pictures). The student will find it easier to recall the pictures if he or she creates ridiculous pictures (including lots of details and colours) to represent objects, link them by making them very attractive (versus simply seeing something standing still), and/or adds emotion to his pictures. Remember, all of these images are pictured in a student's mind not drawn. After the student has mastered a level using concrete objects from "List A – Words for Memory List", try the more challenging list, "List B – Words for Memory List, Including Abstract Words" to help the student advance to the higher levels and really stretch their ability level.

Passing: Pass each level as stated. Spend extra time on level 7.1, making sure that the student makes quick, creative links he/she can easily remember.

Assigned	Passed	Level	
		6.1	The student lists the first 10 presidents
		6.2	The student lists the first 20 presidents
		6.3	The student lists all the presidents
		7.1	The student creates his or her own picture by which to remember 10 concrete objects, such as a clown, puppy, swimming pool, cotton candy, etc. Use List A
		7.2	Same as level 7.1, but with 20 concrete objects. Use List A
		8.1	Same as level 7.1, but with 20 concrete objects that the trainer lists in 60 seconds. Use List a
		8.2	Same as level 8.1, but in 40 seconds. Use List A
		9	The student creates his or her own picture by which to remember 20 objects that the trainer list in 60 seconds. Use List B which contains concrete and abstract words.
		10	Same as level 9, but in 45 seconds.
		11	Same as level 8.1, but in 30 seconds. Use List a
		12	Same as level 11, but use List B

Presidents Script

As you can see, a man is WATCHING-a-TON that could easily drop on top of him. WATCHING-a-TON will remind you of WASHINGTON. (WATCHING-a-TON; WASHINGTON.) The woman who is holding the ton gets her strength from her feet, which aren't really feet but ATOMS. ATOMS will remind you of ADAMS. (ATOMS; ADAMS.) This woman is kicking with her atom foot a CHEF who is HER-SON. CHEF-HER-SON will remind you of JEFFERSON. (CHEF-HER-SON; JEFFERSON.) The chef is not grilling a hamburger, but a...SUN. The sun is already hot and to put him on hot grill is making him a MAD-SUN. (MAD-SUN; MADISON.) On one of the sunbeams, you can see a MAN-ROWing a boat. (MAN-ROW; MONROE.)

As you can see, the man is not rowing with an ordinary oar but one that is made out of an ATOM. (ATOM; ADAMS.) The atom keeps getting tangled in the anchor, which is shaped like a JACK and caught on a SUN. (JACK-SUN; JACKSON.) The sun is very hot and is melting the tire of a VAN. The melting rubber makes a BEAR start to RUN because it is so stinky. (VAN-BEAR-RUN; VAN BUREN.) The bear runs right into a HAIRY-SUN. (HAIRY-SUN; HARRISON.) The hairy son is throwing TILES into the air. (TILES; TYLER)

In this picture, you can see that one of the tiles hit a man on the head. The man is wearing a POLK a-dotted bag. (POLK; POLK.) He obviously needs a new suit, so a TAILOR is measuring him. (TAILOR; TAYLOR.) (For younger students, you can also point at the tail of the tailor.) The tailor has a television show and is being filmed by a FILMER. (FILMER; FILLMORE.) As you can see, the tripod to the camera has PIERCED a BLUE-CANNON. This will tell you that the next two president are PIERCE and BUCHANAN. (PIERCED; PIERCE.) (BLUE-CANNON; BUCHANAN.)

Notice that the blue cannon is LINKED-ON to a LINCOLN. (LINCOLN.) The driver of the Lincoln is a YAWNing SUN. (YAWN-SON; JOHNSON.) In the trunk of the car, you can see a giant GRRRRRowling ANT. (GRRRR-ANT; GRANT.) He is growling because he is hungry and wants to eat the HAY stack. (HAY; HAYES.) You will notice that there is another CAR in the hay FIELD. (CAR-FIELD; GARFIELD.)

The man who just stepped out in the field has a bow and arrow because he is an ARCHER. (ARCHER; ARTHUR.) As you can see, the archer is shooting arrows, which are hitting a CLEAVER. (CLEAVER; CLEVELAND.) The cleaver is being held by a HAIRY-SUN. (HAIRY-SUN; HARRISON.) In his left hand, the hairy sun is chopping lettuce with another CLEAVER. (CLEAVER; CLEVERLAND.) The lettuce is being chopped for a KINGly-MAC or a MAC-who-is-a-KING . (MAC-KINGLY; MCKINLEY.)

Because the Mac has become so fast, he has removed and hung on his throne his most prized possession. a ROSE-on-BELT. (ROSE-on-BELT; ROOSEVELT.) One of the thorns from the rose pricked a RAFT filled with TAFFY. (either RAFT or TAFFY; TAFT.) Sitting in the raft is a WILL nailed to a SUN. (WILL-SUN; WILSON.) The will was just stamped by a HARD-RING. (HARD-RING; HARDING.) The ring is hard because it has been sitting on a COOL-LEDGE. (COOL-LEDGE; COOLIDGE.)

In this picture, you see a HOOVER vacuum cleaner that is hanging off the cool ledge. (HOOVER; HOOVER.) Being sucked into the Hoover vacuum cleaner is another ROSE-on-BELT. (ROSE-on-BELT; ROOSEVELT.) This rose-on-belt belongs to a TWO-MAN. (TWO-MAN; TRUMAN.) The two-man just stepped out of a SHOWER-with-EYES-on it. (EYE-on-SHOWER; EISENHOWER.) The eyes on the shower are watching A CAN-of-D's fall off the tub and hit a YAWNING-SUN. (CAN-of-D's; KENNEDY.) (YAWNING-SUN; JOHNSON.)

If you look at the yawning-sun, you will notice that the sun has NICKS-ON it. (NICK-ON; NIXON.) The nicks were by a FORD truck. (FORD; FORD.) A shopping CART is carrying the Ford truck. (CART; CARTER.) If you look closely at the cart, you will see that there are two RAY GUNS. (RAY GUNS; REAGAN.) The ray guns are being shot into a BUSH. (BUSH; BUSH.) The bush is used to dry clothes and a TON-of-LINT has been collected. (LINT-TON; CLINTON.) On the other side of the lint is another BUSH drying clothes. (BUSH; BUSH.)

On the other side of the drying BUSH, the clothes suddenly inflate into a giant O-BALLOON that starts floating upward. Inside the balloon, there is a smiling man calmly giving a wave. This O-BALLOON MAN will remind you of O-BAMA. (O-BALLOON; OBAMA.) As the balloon pops, the air rushes out in a loud TRRRRRUMP sound like a musical instrument being blown too hard. Out of the sound, a man appears holding a shiny trumpet-shaped GAVEL, announcing decisions with a loud “TRUMP-ET!” This will remind you of TRUMP. (TRUMP-ET; TRUMP.)

The trumpet suddenly transforms into a giant BEE HIVE-DEN where bees are buzzing inside a cozy shelter. Inside the hive, a man carefully rides a BIKE weaving slowly through the bees without being stung. The buzzing “BEE-DEN” sound will remind you of BIDEN. (BEE-DEN; BIDEN.) The bike then slows down and gently circles back, as if returning to the same path again, showing that the TRUMP-ET sound echoes once more in the distance—reminding you that TRUMP returns again like a familiar tune being replayed. (TRUMP again; TRUMP.)

Note that line 1, 2 and 3 of the president card have 10 presidents each. Line 4, however, has 13 president listed.

OUTPUT AUDITORY BAG (IN-OFFICE PROCEDURE ONLY)

Purpose: Develops visualization, concentration, and integration skills

My Benefit:

Equipment: Hacky sack
Metronome (set at 120)

Procedure: The trainer and the student should stand appropriately five feet apart and toss the hacky sack back and forth in beat. The hacky sack should fall into the partner's hand directly on the beat. If the student is having a difficult time keeping the beat, you may want to start very close and slap the hacky sack into each other's hand on the beat

Passing: Follow the listed level for a minimum of 30 seconds on beat.

Assigned	Passed	Level	
		6	Toss the hacky sack on every other beat
		7.1	Count or say the alphabet while tossing the hacky sack one very other beat. The person throwing is the one saying the number or letter
		7.2	While tossing the hacky sack on every other beat, the trainer calls out a sound and the student responds with the most probable spelling
		8.1	While tossing the hacky sack on every other beat, the trainer calls out a letter and the student responds with the most probable sound
		8.2	While tossing the hacky sack on every other beat, trainer randomly calls out a letter or sound and the student responds with the most probable corresponding sound or letter
		9	Toss the hacky sack on every other beat and spell a sentence. The thrower says nothing when there is a blank between words
		10	Same as level 9, but say sound of such letter instead of its name
		11	Same as level 10, but leave vowels as blanks.

OUTPUT FIXATION TRAMP (IN-OFFICE PROCEDURE ONLY)

Purpose: Develops accurate and fast saccadic fixation, integration, and processing speed

My Benefits:

Equipment: Large wall target you create (ten one inch letters or numbers from a distance of 10 feet, some providers use post it notes so they can be easily rearranged).
Trampoline

Procedure: The student should call out the columns of letters or numbers from left to right while jumping on a trampoline.

Passing: 90% correct

Assigned	Passed	Level	
		6	The student should call out the column of the letters or numbers on every other jump
		7	The student should call out numbers as if a one, two, or three was added to them on every other jump
		8	The student should say the most probable sound of each letter on every other jump
		9	Same as level 7, but on every jump
		10	Same as level 8, but on every jump
		11	Same as level 7, but on every jump and add a seven, eight, or nine
		12	Same as level 8, but on every jump and from top right to bottom left corner

OUTPUT INTEGRATION TRAMP (IN OFFICE PROCEDURE ONLY)

Purpose: Develops integrative motor, mental, concentration, processing speed and orientation skills.

My Benefits: _____

Procedure: While jumping on the trampoline, the student should call out two numbers and perform a math calculation in rhythm to his or her jumps

Passing: 8 of 10 correct.

Assigned	Passed	Level	
		6	The student should call out a number, say, "plus," and call out another number in beat to his or her jumping. Then the student should jump silently for two jumps and give the sum of the two numbers he or she called out on the next jump (number...plus...number...jump...jump...sum..., etc).
		7	Same as level 6, but give the <u>difference</u> . Don't use negative numbers (in other words give the absolute value). For example: you would say: "three...and...five...jump...jump...two."
		8	Same as level 6, but give the product
		9	The student should add the numbers. If the sum is even, the student should rotate to the right a quarter-turn on the "sum" jump, and if the sum is odd, the student should rotate left quarter-turn
		10	Same as level 9, but give the <u>difference</u> . Don't use negative numbers. For example, you would say: "three...and ...five...jump...jump...two (rotating right as you say this last number)
		11	Same as level 9, but give the product

OUTPUT MOTOR CLAP

Purpose: Develops auditory-motor integration skills.

My Benefits: _____

Equipment: Metronome (set at 120)

Procedure: The student should clap in rhythm to the metronome while the trainer adds distraction.

Passing: Follow the listed level for a minimum of 30 seconds on beat

Assigned	Passed	Level	
		6.1	The student should clap on every other beat reinforcement from the trainer
		6.2	Same as level 6.1, but without reinforcement (for at least 30 seconds)
		7	The student should clap on every third beat
		8	The student should clap on every other beat and tap his or her foot on every forth beat
		9	The student should clap on every third beat and perform an easy mental activity
		10	The student should clap on every third beat and count by 3's or 4's on every beat (metronome)
		11	Same as level 8, but while carrying on a conversation or performing an easy mental activity.

OUTPUT MOTOR FINGER

Purpose: Develops auditory-fine motor integration and concentration skills

My Benefits: _____

Equipment: Metronome

Procedure: The student should touch his or her thumb to every finger as directed, while the trainer adds a rhythm and other activities

Passing: 90% correct over a period of at least 30 seconds

Assigned	Passed	Level	
		7	The student should touch his or her thumb to each finger on one hand, starting with the pointer finger
		8	Same as level 7, but with both hands at the same time
		9	Touch thumb to each finger from left to right with both hands at the same time (right thumb will touch pinkie first and left thumb will touch pointer first)
			Metronome set at 120 or _____ (adjust as necessary)
		10	Same as level 9, but in beat
		11	Same as level 10, in beat with an easy mental exercise
		12	Same as level 9, but the student right thumb should touch on every beat and his or her left thumb should touch on every other beat (every time one thumb touches one finger, the other thumb touches two fingers).

REASONING PATTERNS SET

Purpose: Develops visual perception, memory and problem-solving skills

My Benefits: _____

Equipment: SET cards
Stopwatch

Procedure: The student should identify “sets” of three cards to earn the specified number of points within the time allowed. Three cards are considered a set when each features (colour, shape, number, and shading) is either the same on each card and/or different on each card (e.g., all cards are red, all have solid shading, all have different shapes, and all have the same number of figures). Notice how the word *all* can be used in every feature. It doesn’t matter if the features are the same or different, as long as each feature on the cards is the same and/or different on all three cards (note game rule). Each set is worth three points (one for each card).

The student may ask for one additional card to be laid out on the table at a cost of one point. The card is not replaced when the next set is picked, so that the number of cards is reduced to the original number (unless the student once again requests an extra card). To pass a level, the student must consecutively pass a level twice.

When giving instruction, especially with younger children, the trainer can lay down two cards and ask, “What do this next card need to be to make a set?” Continue until the student understood the procedure, a higher level is also to have the student play against the trainer.

Passing: Pass each card level twice

Assigned	Passed	Level	
		6.1	Using solid cards only, the trainer should lay out nine cards and the student should make set
		6.2	Same as level 6.1, but the student should earn 20 points in two minutes
		7	Same as level 6.1, but the student should earn 20 points in 90 seconds
		8	Using all cards, the trainer should lay out 12 cards and the student should earn 10 points in five minutes
		9	Same as level 8, but the student should earn 20 points in 8 minutes
		10	Same as level 8, but the student should earn 30 points in 10 minutes
		11	Same as level 8, but the student should earn 42 points in 12 minutes
		12	Same as level 8, but the student should earn 48 points in 12 minutes
		Adult	Same as level 8, but the student should earn 60 points in 15 minutes

REASONING SPATIAL TIC-TAC-TOE

Purpose: Develops concentration, memory, processing speed, and visualization skills

My Benefits:

Equipment: Pencil, paper, metronome
Tic-tac-toe board (see below)

Procedure: The trainer and student play tic-tac-toe

Passing: At least 3 of 5 games are either a tie or a win by the student. To record a win or tie, the game must be played on beat when indicated

Assigned	Passed	Level	
		6	The trainer and student should play several good games of tic-tac-toe on paper so you are confident the student understands the game.
			Metronome set at 120 or _____ (adjust as necessary)
		7	Same as level 6, but they should make their mark on every fourth beat
		8	The trainer and student should play the tic-tac-toe on a form with number one through nine (see below). They should call off the number of the box in which they want to “place” their mark, without actually marking the X’s and O’s. No counting or beat for this level
		9	Same as level 8, but on every fourth beat
		10	The trainer and student should play tic-tac-toe by drawing the grid in the air and pointing to the box they want to place the mark
		11	The trainer and student should play tic-tac-toe in their mind by calling off the number of box they want to place their marks on
		12	Same as level 11, but on every fourth beat
		Adult	Same as level 11, but on every other beat

1	2	3
4	5	6
7	8	9

REASONING VISUAL CARDS (IN OFFICE PROCEDURE ONLY)

Purpose: Develops visualization, visual thinking, and problem solving skill.

My Benefits: _____

Equipment: Visual thinking cards: Sets A and B
Stopwatch

Procedure: The student spends five minutes during each session on this procedure. Follow the instructions found on the cards. The student passes when he or she completes all cards of that level. Encourage the student to do as much cards as possible during the five minutes. Do not give the answer; let the student work it out. if the student needs help, have the student do his or her thinking out loud, so that you can help correct any faulty thinking. Or, you can lead the student with questions to explore other thinking strategies. Do not write on any card! Instead copy cards as needed when you assign this as homework.

From set A and B, remove and copy the indicated cards to create the following homework sheet.

7.	A	18	25	29	32		
8.	A	40	43	62	67	80	
9.	A	81	84	91	94	97	
10.	B	10	11	18	31	43	49
11.	B	51	52	62	65	68	
12.	B	71	73	76	79	82	84
Adult	B	87	90	93	94	95	98

Passing: Pass level as stated below

Assigned	Passed	Level	
		6	The student should complete A1 – A24 (except homework cards)
		7	The student should complete A26 – A50 (Except homework cards)
		8	The student should complete A51 – A75 (except homework cards)
		9	The student should complete A76 – A100 (except homework cards)
		10	The student should complete B1 – B25 (except homework cards)
		11	The student should complete B26 – B50 (except homework cards)
		12	The student should complete b51 - B75 (except homework cards)
		Adult	The student should complete B76 – B100 (except homework cards)

VISUAL FIXATION NUMBERS

Purpose: Develops accurate and fast saccadic fixation, concentration, integration, and processing speed

My Benefits:

—

Equipment: Saccadic columns
Metronome

Procedure: The students should read the columns of numbers as directed. Always have the student start with the column farther to the left

Passing: 90% and on beat.

Assigned	Passed	Level	
		6	The student should read the numbers of the inner columns (C and D)
			Metronome set at 120 or _____ (adjust as necessary)
		7.1	Same as level 6, but on every other beat
		7.2	Same as level 6, but on every beat
		7.3	The student read the numbers of the middle columns (B and E) to every beat
		8	Same as level 7.3, but with the outer columns (A and F)
		9	The student should read a number from the top of column C and read a number from the bottom of column D to every beat. He or she should continue alternating in this manner until completion of the inner columns. For example, the top of the VFN chart reads, "1, 5, 5, 3, 3, 6, 7..."
		10	The student should add one, two, or three to the numbers of the inner columns (C and D) and state the new numbers to every other beat
		11	The student should read the numbers of the outer columns (A and F) to every beat and add one, two, or three to each number
		12	Same as level 9, but the student should add one, two, or three to each number

<u>A</u>	<u>B</u>	<u>C</u>	<u>D</u>	<u>E</u>	<u>F</u>
4	1	1	2	2	6
0	5	5	3	4	2
2	8	3	6	7	8
8	9	7	5	5	6
7	4	2	4	0	4
6	1	4	0	1	1
4	3	6	2	6	7
1	6	4	3	9	0
5	9	0	1	8	2
8	7	1	5	5	3
0	4	0	6	1	4
3	5	8	3	4	8
2	3	1	5	6	4

7	4	5	3	3	8
2	8	6	2	2	4
6	4	7	7	7	3
9	2	1	8	4	3
3	5	3	7	2	5
2	7	2	5	9	5
0	0	4	9	0	1
6	1	7	2	5	0
6	4	5	8	4	1
8	3	6	2	1	0
7	6	8	5	4	4
2	5	6	8	7	6
1	9	1	7	3	8

VISUAL SPATIAL GOLF

Purpose: Develops memory and visualization skills

My Benefits:

Equipment: Golf course forms

Procedure: The golf sheet should be at reading distance in front of the student. The student starts at the black starting circle and looks where the first hole is, closes his or her eye and visualizes the hole. The student then tries to draw in line from the starting point to the golf hole while avoiding all hazards (no practice draw in the air is allowed). When the student stops drawing at the point he or she thinks the hole is, the student opens his or her eyes to see where the line is. This is one stroke. There is also a penalty stroke for anytime the student enters a hazard line or goes off the page. If the student did not end up in the hole, he or she starts from the point the first line ended and repeats the procedure. When the student does get the line in the hole, the trainer should record all strokes and penalties for that hole. Then the student begins from the hole just finished and continues to the next hole.

Passing: Pass level as stated below

Assigned	Passed	Level	
		7	The student should complete target "A" with a score of 45
		8	Target "A" with a score of 36
		9	Target "B" with a score of 45
		10	Target "B" with a score of 36
		11	Target "C" or "D" with a score of 54
		12	Target "C" or "D" with a score of 45
		Adult	Target "C" or "D" with a score of 36

VISUAL SPELLING LIST

Purpose: Develops visualization skills

My Benefits:

Equipment: Visualization spelling list or school spelling list

Procedure: The trainer may use the student's school spelling list in place of the "Visualization Spelling List" that is provided. The student should close his or her eyes and spell words as the trainer request. As the student spells, they should point to the location where they are visualizing the letters. You may find that student may visualize easily if they look to the upper left.

Passing: Student can spell words as quickly backward as forward

Assigned	Passed	Level	
		9	The student should spell four and five-letter words forward, backwards, and by jumping around to say any letter within the word
		10	Same as level 9, but with six-letter words
		11	Same as level 9, but with seven-letter words
		12	Same as level 9, but with eight-letter words
		Adult	Same as level 9, but with nine to twelve-letter words

AUDITORY PROCESSING

The purpose of the following procedure is not to teach reading or spelling, but to improve the underlying skills of blending, segmenting, and auditory analysis that are required to read and spell properly.

We will be using 17 of the 43 sounds in the English language. Twelve of these sounds are consonants and five are vowel. Each of the 17 sounds is represented by a single letter code. We are limiting the number of sounds and alternative spellings a student needs to memorize so we can quickly begin to improve a student's auditory processing skills.

If the student lack sound code knowledge and the codes' optional spellings, he should be enrolled in the Master the code reading program.

Sounds to be used: /b/ /d/ /f/ /k/ /l/ /m/ /n/ /p/ /r/ /s/ /t/ /w/ /a/ /e/ /i/ /o/ /u/

Individual sounds Clustered together at the beginning of words: bl br cl cr dr fl fr kl kr pl pr sk sl sm sn sp st sw tr tw

Individual sounds clustered together at the end of words: ct ft ld lf lm ln lp lt mp nd nt pt sk sp st

The auditory processing procedure and their purposes are:

Auditory Instruction Code (AIC): This teaches and drills the 17 sounds used in this program. The AIC-1 and AIC-2 lessons must be completed and the sounds mastered before moving to other procedures.

Auditory Segment Word (ASW): This builds the ability to hear the individual sounds within words by asking the students to unglue/segment the individual sounds that make up a word.

Auditory Segment Target (AST): This builds the ability to hear the individual sounds within words by asking the student to recite a sound based upon its position within the word as directed by the trainer.

Auditory Blend Read (ABR): This builds the ability to blend isolated sounds into words by reciting the individual sounds seen in a word and then blending those sounds to say the word.

Auditory Blend Oral (ABO): This builds the ability to blend isolated sounds into words by blending the individual sounds heard into words.

Auditory Analysis Drop (AAD): This builds the ability to analyze and manipulate sounds within words by saying a word that is the result of removing a specified sound from a word heard.

Auditory Analysis Replace (AAR): This builds the ability to analyze and manipulate sounds by reciting words created by substituting other vowel sounds for the original. It also strengthens a student's ability to pronounce vowel sounds.

Auditory Analysis Switch (AAS): This builds the ability to analyze and manipulate sounds within words by switching first and last sounds.

Note to trainers and parents:

The Sounds from Auditory Instruction Code (lessons 1 and 2) must be mastered before moving to the other procedures. Once the student is confident after drilling these basic sounds on AP-1, AP-2, and AP-3, the trainer may focus on any of the other auditory procedures. In general, work on the procedures from easiest to hardest for that student, even if that means completing all of the drill sheet for one of the procedures before you have worked with all of the auditory procedures. If necessary for AP-4 to AP-14, you may do the AIC drill after completing the other procedures.

Each sound is introduced with a brief description of how it is made. The key points in this code and sound introduction are:

- Say the sound and have the student repeat it several times
- Use questions to help the student discover information, yet keep the lesson moving quickly.
- Do not use letter names. Our focus is on the sound.
- Briefly describe what the mouth parts are doing to make the sound.
- Determine if the sound is noisy or quiet

When the student makes an error, the trainer should give immediate feedback. In most cases the trainer repeats the word or sound, saying it correctly.

Passing: 90% or more correct and on beat

Note: The student should deal with some words from each auditory drill sheet. However, the student does not have to read each word on each drill sheet to pass. If he or she is not having difficulty with a procedure on a particular drill sheet, quickly pass to the next drill sheet (but be sure to skip around the drill sheet so the student is forced to deal with some of the different combinations rather than only words with the /a/ sound for example). In addition, do not hold back a student who is having a specific problem (for example, mixing up /b/ and /d/). Instead, pass to the next level, but be sure to work on the specific problem separately.

If the student has difficulty:

Remembering which sound goes with which code. Emphasize which mouth parts are involved and how they function in making the sound. Review the descriptive words (tapping, fanning, windy, nose, squeezing, popping, kicking, lifting) to help the student link what he feels with what he hears. Adding this association will allow

the student to self-correct. On AP-1 and AP-2, you may want to drill by having a student say the sound and then its description (windy, nose, etc.).

Identifying a sound. Have the student watch the trainer's mouth to get clues about what the parts are doing to form the sound.

Doing a procedure at the speed indicated. You may need to practice and drill without the beat or temporarily slow the beat down until the student's skills improve.

Blending sounds. Give the students some initial help by stretching out the sounds (/m----a----t/ for 'mat') or decreasing the time interval between the sounds to ½ seconds. Remember that you are stretching the sounds, not saying the sounds numerous times.

Blending three sound words. Give the first two sounds of the word and then the third sound after a two-beat delay (**T:** /n/, /a/, beat, beat **S:** 'na', beat, beat, **T:** /p/, beat, beat, **S:** 'nap').

Difficulty with the AIC drills. Start each new drill sheet with ABO and the ABR before trying to have the student give each word on beat. If necessary, complete all of the other auditory processing procedures before doing the AIC drill. Remember, in general, work on the procedure from easiest to hardest for that student.

Definitions

/s/ = This is used to represent an isolated sound

/T/ = Trainer's part

/S/ = Student's part

CV, VC, etc. = On the AP drill sheet, the title tells about the vowel (V) and consonant (C) that are used on that drill sheet.

Timed: Time is a column or a certain number letters with a stopwatch. Then encourage to beat his best time. Work to have the student say one word per second or faster.

On/between beat: With the metronome on, the student is either to respond on the beat of the metronome or in between the beat (at the direction of the trainer). Although working in between beat is more difficult to do in general, it's also easier to hear the student's respond. It can be beneficial to practice in between beats in a session because using the auditory processing CDs at home often requires responses in between beats.

60 to 120bpm: Set the metronome somewhere between sixty beat per minute and 120 beat per minute. Start at a pace that the student can achieve. As the student skills improve, increase the speed to the challenge intensity.

Up/across/jump: Vary the task by having the student read down a column, up a column, across rows, or alternatively read from one column to another (read column 1/row 1, then jump to column 4/row 4, then jump back to column 1/row 2, then to column 4/row 2, then to column 1/row 3,... etc.). This ensures that a student isn't memorizing the answers.

Instruction for the Auditory Processing CDs:

The Auditory Processing CDs contain a reading of all the sound and words on drill sheet AP-1 – AP-14. These CDs can be used in two ways:

1. The student may listen to the sounds and then repeat them
2. The student may read the sound and then hear the sound on the CD for immediate feedback. This is especially helpful if the home trainer have difficulty with the Auditory Processing Procedures.

Auditory Processing Procedures

Purpose: The Auditory Processing Procedure helps a student hear the difference, order and number of sounds in words more quickly. This is a key underlying skill to learn to read and spell. There are procedures for analysis, blending, and segmenting sounds in syllables

My Benefits: _____

Equipment: AP Drill Sheet, Metronome

AIC

Auditory Instruction Code (AIC)

Teach and drill the code. See AIC – Lesson 1 and AIC – Lesson 2 for specific instructions. Note: before level 11 there are some special instructions (see the end of AIC – Lesson 2). To keep the drills at a challenging level, do them timed or on/between beat – ranging from 60 to 129bpm (up/across/jump columns of sheet).

Assigned	Passed	Level	
		1	Do AIC – Lesson 1. Drill on AP – 1 : nine sounds
		2	Do AIC – Lesson 2. Drill on AP – 2 : eight sounds
		3	Drill on AP - 3 : the five isolated vowel sounds and all seventeen sounds
		4	Drill on AP – 4 : two sounds.
		5	Drill on AP - 5 : three sounds.
		6	Drill on AP – 6 : three sounds.
		7	Drill on AP – 7 : three sounds.
		8	Drill on AP – 8 : three sounds.
		9	Drill on AP – 9 : four sounds.
		10	Drill on AP – 10 : four sounds.
		11	See the special instructions at the end of AIC – Lesson 2. Drill on AP – 11 : four sounds.
		12	Drill on AP – 12 : four sounds.
		13	Drill on AP – 13 : five sounds.

Auditory Segment Word (ASW)

The trainer says a word. The student repeats the word and then says and writes each sound in beat.

“I am going to say a word. After one beat you are to repeat that word and with a beat in between write and say each sound in word” (T: ‘un’, beat, /u/, beat, /n/, beat, T: ‘pon’, beat. /p/, beat, /o/, beat, /n/, beat...). Do on/between 60 – 120bpm.

Modifications: If you want to make this procedure more challenging, don’t have the student repeat the word before saying and writing each sound. If you need to make this simpler, start by having the student segment the sounds in words without any writing. Then, add in the writing component again as quickly as possible.

Assigned	Passed	Level	
		3	Drill on AP - 3 : one sound
		4	Drill on AP - 4 : two sounds.
		5	Drill on AP - 5 : three sounds.
		6	Drill on AP - 6 : three sounds.
		7	Drill on AP - 7 : three sounds.
		8	Drill on AP - 8 : three sounds.
		9	Drill on AP - 9 : four sounds.
		10	Drill on AP - 10 : four sounds.
		11	Drill on AP - 11 : four sounds.
		12	Drill on AP - 12 : four sounds.
		13	Drill on AP - 13 : five sounds.
		14	Drill on AP - 14 : mixed three to five sounds.

Auditory Segment Target (AST)

The trainer says a word and a sound position. The student repeats the word and then says the targeted sound after one beat. **“I’m going to say a word and then tell you which sound in the word – first, second, third, last, etc. – you are to give back to me.”** (T: ‘un’, beat, ‘last’, beat, S: ‘un’, beat, /n/, beat, T: ‘dat’, beat, ‘second’, beat, S: ‘dat’, beat, /a/...). See the chart below for specific instructions. Do on/between 60 -120bpm. If you want to make this more challenging, don’t have the student repeat the word before saying each sound.

Assigned	Passed	Level	
			Drill on AP – 4: two sounds (say first or last sound as directed)
			Drill on AP – 5: three sounds (say first, second, or third sound as directed).
			Drill on AP – 6: three sounds (say first, second, or third sound as directed).
			Drill on AP – 7: three sounds (say first, second, or third sound as directed).
			Drill on AP – 8: three sounds (say first, second, or third sound as directed).
			Drill on AP – 9: four sounds (say first, second, third, or fourth sound as directed).
			Drill on AP – 10: four sounds (say first, second, third or fourth sound as directed).
			Drill on AP – 11: four sounds (say first, second, third, or fourth sound as directed).
			Drill on AP – 12: four sounds (say first, second, third, or fourth sound as directed).
			Drill on AP – 13: five sounds (say first sound of first word, second sound of second word, third sound of third word, fourth sound of fourth word. Fifth sound of fifth word, then continue by starting the cycle over again.

Auditory Blend Read (ABR)

The student says each sound in a printed word and then blends and reads the word **“I want you to look at the first word and say each sound of the word in order. After you have said all the sounds in the word, blend the sounds together to read the full word. After one beat do the same thing with the second word and continue down the column.”** (Student see ‘luft’, and says in beat: /l/, /u/, /f/, /t/, ‘luft’, beat, Student sees ‘trak’ and says in beat, /t/, /r/, /a/, /k/, ‘trak’, beat,...). Do on/between 60 – 120bpm.

Assigned	Passed	Level	
		4	Drill on AP - 4 : two sounds.
		5	Drill on AP - 5 : three sounds.
		6	Drill on AP - 6 : three sounds.
		7	Drill on AP - 7 : three sounds.
		8	Drill on AP - 8 : three sounds.
		9	Drill on AP - 9 : four sounds.
		10	Drill on AP - 10 : four sounds.
		11	Drill on AP - 11 : four sounds.
		12	Drill on AP - 12 : four sounds.
		13	Drill on AP - 13 : five sounds.
		14	Drill on AP - 14 : mixed three to five sounds.

Auditory Blend Oral (ABO)

The trainer says isolated sounds on beat. The student says the blended words after a two beat delay. **“I’m going to say isolated sounds. After I stop, wait two beats then blend those sounds to say the words they make”** (T: /o/, /t/, beat, beat, S: ‘ot’, beat, beat, T: /r/, /e/, /t/, beat, beat, S: ‘ret’...). Do on/between 60 – 120 bpm. If the student has difficulty, sometimes going at a faster pace (turning up the speed of the metronome) makes this task easier for the student. You can also have the student elongate sounds to help connect them. For example, with the word ‘map’: (/mmmmm/ /aaaaa/ /p/).

Assigned	Passed	Level	
		4	Drill on AP - 4 : two sounds.
		5	Drill on AP - 5 : three sounds.
		6	Drill on AP - 6 : three sounds.
		7	Drill on AP - 7 : three sounds.
		8	Drill on AP - 8 : three sounds.
		9	Drill on AP - 9 : four sounds.
		10	Drill on AP - 10 : four sounds.
		11	Drill on AP - 11 : four sounds.
		12	Drill on AP - 12 : four sounds.
		13	Drill on AP - 13 : five sounds.
		14	Drill on AP - 14 : mixed three to five sounds.

Auditory Analysis Drop (AAD)

The trainer says a word and the student recites the word, but without one of the sounds as directed. **“I’m going to give you a word and ask you to say what that word would become without one of the sounds. For example, if you were to say ‘at’ without /t/ you would say...? (/a).”** For level 4, use the following instructions: **“I’ll say a word and you wait one beat then say the word back to me, but without the first sound.”** (T: ‘bot’, beat S: ‘ot’, beat, T: ‘pat’, beat, S: ‘at’...). For level 4, also change the directions so the student drops the last sound. For level 5 – 12, adjust the instruction as directed below. Do at 60 bpm. If the activity is too difficult, have the student repeat the word before dropping a sound. Always remember that for words of three or more sounds, you cannot drop the vowel sounds

Assigned	Passed	Level	
		4	Drill on AP – 4 . Drop either the first or last sound
		5	Drill on AP – 5 . Drop either the first or last sound
		6	Drill on AP – 6 . Drop either the second or last sound
		7	Drill on AP – 7 . Drop either the first or second sound
		8	Drill on AP – 8 . Drop out a sound as directed, varying which <u>consonant</u> sound to drop (T: ‘cat’, beat, last, beat, S: ‘ca’, beat, beat, T: ‘lut’, beat, first, S: ‘ut’,...)
		9	Drill on AP – 9 : Drop out the first <u>consonant</u> sound of the first word, second consonant sound of the second word, third consonant sound of the third word, and then continue by starting the same cycle over again (T: ‘prim’, beat, S: ‘rim’, beat, T: ‘trek’, beat, S: ‘tek’, beat, T: ‘blat’, beat, S: ‘bla’, beat, T: ‘skin’, beat, S: ‘kin’,....).
		10	Drill on AP – 10 . Same as level 9 instructions
		11	Drill on AP – 11 . Same as level 9 instructions
		12	Drill on AP – 12 . Same as level 9 instructions.

Auditory Analysis Replace (AAR)

After the word is given by the trainer, the student looks at the sheet of five vowels and say in beat the word made by replacing the vowel in the \\\nword with the five vowels in the following order: /i/ /e/ /a/ /u/ /o/. **“I’m going to say a word. You look at this sheet with the five vowel sounds of /i/ /e/ /a/ /u/ /o/, and change the word I say into five new words by replacing the vowel sounds. If I say ‘at’ you would put the /i/ sound in place of the /a/ sound and say ‘it’. Then you would replace the /a/ sound with the ‘e’ sound and say ‘et’, then replace the /a/ sound with the /a/ sound and get ‘at’, and do the same thing with the /u/ and /o/ sounds,”** (T: ‘bot’, beat, beat, S: ‘bit’, beat, ‘bet’, beat, ‘bat’, ‘but’, beat, ‘bot’, beat, T: ‘and’, beat, beat, S: ‘ind’, beat, ‘end’,.....). Do on/between 60 – 120 bpm. The vowel sheet for the student to look at is on a chart that is separate from his workbook.

Assigned	Passed	Level	
		4	Drill on AP - 4 : two sounds.
		5	Drill on AP - 5 : three sounds.
		6	Drill on AP - 6 : three sounds.
		7	Drill on AP - 7 : three sounds.
		8	Drill on AP - 8 : three sounds.
		9	Drill on AP - 9 : four sounds.
		10	Drill on AP - 10 : four sounds.
		11	Drill on AP - 11 : four sounds.
		12	Drill on AP - 12 : four sounds.
		13	Drill on AP - 13 : five sounds.
		14	Drill on AP - 14 : mixed three to five sounds.

Auditory Analysis Switch (AAS)

The trainer says a word and the student responds by saying the word but with the first and last sound switched. **“I’m going to say a word and you will say the sound backwards. That is, you will say the first sound last and the last sound first. If I say ‘at’ you would switch the first and last sound and say ‘ta’. If I say ‘ed’ you would say... [‘de’]. If I say ‘pab’ you would say... [‘bap’].”** (T: ‘op’, beat, beat, S: ‘po’, beat, beat, T: ‘cat’, beat, beat, S: ‘tac’,...). Do on/between 60 – 120 bpm. If this activity is too difficult, have the student repeat the word before saying the sound backwards.

Assigned	Passed	Level	
		4	Drill on AP – 4 : two sounds (use only columns 1, 2, 3, and 6)
		5	Drill on AP – 5 : three sounds (do not use the real words on the bottom section).

Note to trainer: The bold words are the script a trainer needs to say verbatim and the non-bolded words are things trainers should do and be aware of.

AIC – Lesson 1

“When we read and spell, we are using letter symbols to write down the different sounds that we say. These sounds are very important, so I want to take some time to go through nine of the sound in this first lesson. I want you to concentrate on how these different sounds feel. That is, I want you to feel what your (point to as you say) mouth, lips, teeth, tongue, and throat are doing to make these sounds. Let’s try a sound”

/m/ and /n/

“Check out this sound: /m/.“ Repeat a few times and have the student repeat after you. **“That is the sound we say when something taste really good: /mmmm/. What is your mouth doing? Your mouth is completely closed, pinch your nose together and try to make the sound /m/. You can’t, because the sound come through your Nose”**

Write or have the student write on the AIC – Lesson worksheet the letter code ‘m’ for the sound /m/.

“Check out this sound : /n/.“ Repeat a few times and have the student repeat after you. **“This is another sound that comes through your nose, but this time you mouth is slightly open and the tip of your tongue is right behind your top front teeth.”**

Write or have the student write on the AIC – Lesson 1 Worksheet the code ‘n’ for the sound /n/.

/d/ and /t/

“Check out this sound: /d/.” Have the student repeat. **“What do you feel your mouth parts doing?”** Try to direct the student by asking questions that leads to the right conclusion. **Can you feel your tongue tapping the roof of your mouth right behind your teeth?”**

“Cover one ear with one hand and feel your throat as you say /d/.” be sure the student don’t say /du/ for /d/. Have the student repeat a few times. **“Can you hear and feel the difference? That’s why we call /d/ a noisy sound.”**

Write or have the student write on the AIC – Lesson 1 Worksheet the letter code ‘d’ for the sound /d/.

“There is another sound where the tongue taps the same way, but this sound is quiet. Try to figure it out by whispering the sound” Help them discover /t/. **“/t/ taps just like /d/ but it is quiet. Cover one ear with your hand and feel your throat. Compare /t/ and /d/. Can you hear and feel the difference?”** Have the student repeat a few times. If the student can hear the difference, have the student focus on feeling the vibration of /d/ and lack of vibration for /t/.

Write or have the student write and AIC – Lesson 1 Worksheet the code ‘t’ for the sound /t/.

/p/ and /b/

“Check out this sound: /p/.” Have the student repeat several times. **“What part of your mouth is working? (lips) Can you feel your lips popping out air?”** Student should cover one ear or feel his throat. **“Can you tell that /p/ is quiet?”**

Write or have the student write and AIC – Lesson 1 Worksheet the letter code ‘p’ for the sound /p/

“Let’s do the same thing by popping our lips, but this time try to find the sound that is noisy.” Let him try to discover /b/. **“The sound is /b/.”** Repeat several times with the student.

Write or have the student write on the AIC – Lesson 1 Worksheet the code ‘b’ for the sound /b/.

/s/

“Try this sound: /s/. It sounds like air squeezing out of a balloon. I make the /s/ sound by trying to squeeze the air through my front teeth. Is /s/ noisy or quiet?” (quiet)

Write or have the student write on the AIC – Lesson Worksheet on the code ‘s’ for the sound /s/.

/e/ and /o/

“Now we are going to work with two vowels. Vowels are noisy sounds. With most vowels, the tongue, teeth, and lips don’t do much, but your mouth does make some slight changes to create a new vowel sound. For the next two sounds, notice how wide you open your mouth.”

“Try this sound: /e/, as in ‘bed’ and ‘pet’. Say /e/.” Have the student repeat. “When I say /e/ my mouth is half way open. Now try this sound: /o/, as in ‘on’ and ‘Bob’. When I say /o/, I open my mouth even more. Say /o/.” Have the student repeat several times.”Now try both sounds and see if you notice the difference. Say /e/ and then /o/ several times. Can you feel the difference in how opened your mouth is?”

Write or have the student write on the AIC – Lesson 1 Worksheet the code ‘e’ for the sound /e/
Write or have the student write on the AIC – Lesson 1 Worksheet the code ‘o’ for the sound /o/

Now drill using AP-1. Work towards mastery, drilling most on those sounds that the student finds difficult. To keep the drill at a challenging level, do them timed or on beat, ranging from 60 to 120 bpm (up/across/jump columns of sheet).

Notes:

AIC – Lesson 1 Worksheet

The benefits I will gain from the auditory processing procedures are:

Lesson 1	Mouth parts	Type of sound	Volume	Key word	code
/m/	Mouth closed/sound Through nose	nose	noisy	mom	
/n/	Mouth slightly Open/sound through Nose	nose	noisy	nap	
/d/	Tongue tapping roof Of mouth behind Teeth	tapper	noisy	did	
/t/	Tongue tapping roof Of mouth behind Teeth	tapper	quiet	top	
/p/	Lips popping out air	popper	quiet	pop	
/b/	Lips popping out air	popper	noisy	bat	
/s/	Air squeezes Through teeth	squeezer	quiet	sun	
/e/	Half smile mouth	vowel	noisy	ed	
/o/	Open mouth	vowel	noisy	on	

Notes:

AIC – Lesson 2

/f/

“Check out this sound: /k/.” Repeat a few times and have the student repeat after you. **“Can you feel the air fanning over your lower lips? /f/ uses your teeth and your lower lips. Can you feel your upper teeth touching your lower lips? Is it quiet or noisy?”** (quiet)

Write or have the student write on AIC – Lesson 2 Worksheet the code ‘f’ for the sound /f/.

/k/

“Check out this sound: /k/.” Repeat a few times and have the student repeat after you. **“What are you using to make the sound? You should feel your tongue kicking against the top of your mouth. Is this sound noisy or quiet?”** (quiet)

Write or have the student write on AIC – Lesson 2 worksheet code ‘k’ for sound /s/

/l/

“Check out this sound: /l/.” Repeat a few times and have the student repeat after you. **“What are you using to make this sound? Notice that you are using the tip of your tongue, but this time it lifts and stays on top of your mouth.”**

Write or have the student write on AIC – Lesson2 worksheet the code ‘l’ for the sound /l/.

/r/

The next sound is very similar to /l/, except it’s noisier. The tongue also lifts and stays on top of the mouth. The sound is /r/.” Repeat a few times and have the student repeat after you. If the student continues to say /er/ instead of /r/, help them understand their mistake by explaining that we say “/rat/” not “/er-at/.”

Write or have the student on the AIC – Lesson 2 Worksheet the code ‘r’ for the sound /r/

/w/

“Check out this sound: /w/.” Repeat a few times and have the student repeat after you. **“What are you using to make this sound? You are using your top lips. Is /w/ quiet or noisy? (noisy) My lips start out almost close and then open up to blow out wind. Put your hand in front of your mouth and see if you can feel any wind.”**

Write or have the student write on the AIC – Lesson 2 Worksheet the code ‘w’ for the sound /w/.

/a/, /i/, /u/

“We have already learned two vowels, /e/ and /o/. Remember that in making vowel sounds the mouth barely moves. It just opens more for the /o/. Now here are three more noisy vowels. Try this one: /a/, as in ‘pan’ and ‘sat’.” Repeat a few times and have the student repeat after you. **“Now try**

this sound: /i/, as in ‘lip’ and ‘kit’. And the next one is /u/, like in ‘up’ or ‘putt’.” Repeat these sound a few times and have the student repeat after you.

“Now let’s say them in this order - /i/, /e/, /a/, /u/, /o/. Can you feel your mouth opening a little more as you say these sounds? Try it with me. /i/, /e/, /a/, /u/, /o/.” Have the student repeat with you a few times. “Can you feel your jaw dropping as they go from /i/ to /o/ or going up fro /o/ to /i/?”

Write or have the student write the AIC – Lesson 2 Worksheet the code ‘a’, ‘l’, ‘u’, for the sounds /a/, /i/, /u/.

Review the five vowel sounds and their codes /i/, /e/, /a/, /u/, /o/.

Now drill using AP-2 drill, work towards mastery, drilling most on those sounds that the student find difficult. To keep the drills at a challenging level, do them timed or on beat, ranging from 60 to 120bpm, (up/across/jump columns of sheet) .

After completing the Ap-2 drill, begin working on the auditory processing drill (AIC Drill, ASW, AST, ABR, AAD, AAR, AAS) using drill sheets Ap-3 to AP-14. Be sure to refer to the Auditory Produce Flow Chart for a reference to the appropriate drill sheets to use. If the student is having difficulty with the AIC Drill, do some or all of the other auditory processing procedures first.

Special Instructions to use before drilling on AP – 11

“Before we practice using this drill sheet, I want to mention that you will notice words that use the same letter twice at the end of a word like (point to words on top of AP-11 drill sheet) ‘bluff’, ‘class’, or ‘still’. When that happens, the double letters represent only one sound, as if only one of the letters were used. For instance, it is not (point) /b/, /l/, /u/, /f/, /f/. It is (point to each letter and then the ‘ff’ at the same time) /b/, /l/, /u/, /f/.”

AIC – Lesson 2 Worksheet

Lesson 2	mouth parts	Type of sound	Volume	Key word	code
/f/	Air fans over lower lip	fanner	quiet	fan	
/k/	Tongue kicks top of mouth	kicker	quiet	kit cat	
/l/	Tongue lifts and stays up	lifter	noisy	lap	
/r/	Tongue lifts back and stays up – more vibration	lifter	noisy	red	
/w/	Lips open to blow out wind	windy	noisy	wet	
/a/	Half smile mouth	vowel	noisy	at	
/i/	Full smile mouth	vowel	noisy	it	
/u/	Half smile mouth	vowel	noisy	up
